Haicheng Charles ZHAO

EDUCATION & RELEVANT COURSEWORK

LANGUAGES & TECHNOLOGIES

Princeton University, 2017 - 2021

Concentrating in Computer Science, with a Finance Certificate

Programming Systems, Microeconomic Theory

Thomas Jefferson High School for Science and Technology, 2013 – 2017

GPA: 4.523 (weighted), 4.0 (unweighted)

SAT (NEW): 1600

Artificial Intelligence, Parallel Computing, Web & Mobile App Develop-

ment, AP Micro- & Macroeconomics

General Purpose: Python • Java • C

Web Development: Javascript/ES6 • jQuery • SCSS

• React • Redux • Jekyll •

Django • Flask

Other: Git • Linux • OpenCV • ROS •

ETFX • MPI • OpenMP • Mes-

senger Platform

EXPERIENCE

Software Engineer, PrepFactory

June 2017 - Present

- Convinced founder to let me code after learning React and Redux and developing prototype for new feature over weekend.
- Collaborated with startup founder to design a new clean and interactive UI for practice tests, and then developed a web app implementing these practice tests, now used throughout the website.
- Developed an adaptive diagnostic test algorithm that quickly estimates a score range and confidence level on the ACT.
- Managed several other interns in developing the test.

Technology and Finance Lead, TJ Intermediate Open in Informatics

November 2016 – June 2017

- Organized and ran TJ IOI, a seven-hour high school programming competition in which eight teams competed, for the first time in four years.
- As Technology Lead, created a restricted Linux virtual machine on which participants programmed.
- As Finance Lead, managed a team that contacted companies and acquired over \$2,000 for shirts, food, facilities, and prizes.

Co-Captain, Senior Computer Team

September 2016 – June 2017

- Wrote and gave lectures on algorithms, especially those tested in the USA Computing Olympiad (USACO), at weekly 40-minute meetings.
- Held contests and selected teams to participate in programming competitions.

TECHNICAL PROJECTS

Epochs: A Time Micromanagement App

August 2017 - Present

- Use React and Redux to develop a web app that allows users to micromanage their time.
- Implement a Progressive Web App (PWA) with offline capabilities and ability to send notifications using service workers.

AIM Robotics FIRST Robotics Competition (FRC) Team, Lead Programmer

November 2016 - June 2017

- Persuaded team to scrap all old code, and designed a structured, modular software framework.
- Implemented accurate self-correcting driving using several layers of feed-forward PID controllers in Python.
- Used PID controllers and computer vision with OpenCV to implement an autonomous phase where the robot could reliably locate a rod, drive to it, and release a gear onto it.
- · Won Innovation in Control Award.

Solace: Exploratory Autonomous Vehicle Research Project

September 2016 - June 2017

- Built a 1/8th-scale R/C car mounted with various sensors and programmed it using the Robot Operating System (ROS) and Python to drive autonomously to a specified location, through both known and unknown areas.
- Designed novel method for dynamically determining the optimal path through both known and unknown areas by coupling Adaptive Monte Carlo Localization (AMCL) with the Gmapping SLAM algorithm using image stitching.

AlexaBot March 2016 – July 2016

- Developed Facebook Messenger bot that lets a user interact with Amazon Alexa remotely through text rather than speech.
- Wrote bot in Python using Tornado while Messenger Platform was still in beta.
- Bot has had more than 2000 users, and we ensured reliable uptime and quick bug-fixing during its increase in popularity.

AWARDS & ACHIEVEMENTS

2nd Place in VCU High School Programming Contest

March 2017

Won 2nd place out of 40 teams in this algorithms contest.

MIT Beaver Works Summer Institute

August 2016

Selected as one of 40 students nationwide to participate in this 4-week program concerning autonomous vehicles. At end of program, selected by faculty as most likely to be an "Inventor of Something Big."

Best Website at HackTJ 2016

February 2016

Developed website that teaches Mandarin definitions and pronunciations. Best website out of 120 teams.
